

EMT RCA Cable

This cable is designed for all kinds of analogue connection. It can be used as an MC phono-cable between turntable and phono-stage, as an interconnect between analogue devices as well as to connect our step-up-transformer with any MM input.

The well-tried EMT copper-wiring is combined with the most advanced shielding- and connector-technology. The complete cable undergoes the latest cryo-treatment, to reduce inner stress and to improve the crystal structure and thus the electrical properties.

The connectors are labelled with the EMT logo, its arrow shows the direction from source to receiver.
