The Lamm M.3 Signature

An amplifier with the power to alter your beliefs about what is possible.

AMPLIFIER CHOICE

More than a different breed in a new species.

See the review at www.stereophile.com

There are small amps, there are large amps, there are stereo amps, there are mono amps, and then there are those. Lamm's M.3 Signature has a choice of both.

The M.3 is absolutely no match more superior to all other amplifiers available. It is more accurate, the source of the "transient" is different.

stereo amps, there are mono amps, and then there are
Vladimir Lamm's ML3 Signature two-channel monoblocks...
John Walker, Absolute Sound, November, April 2009

...The ML3 is obviously so much more superior to all
the possible contenders that it alone occupies the throne
of the "Amplifier's Olympus."
S. Tarantino, Audio Monthly/February 2009

The Lamm LL.1 Signature

An amplifier with the power to alter your beliefs about what is possible.

MOVING CHOICE

What does a different kind of amplifier sound like? It's a choice you can't make until you've heard it.

There are about 1000 amplifiers on the market. There are about 1000 different ways to build an amplifier. There are about 1000 different ways to build a speaker. There are about 1000 different ways to build a system. There are about 1000 different ways to build a life.

The Lamm LL.1 Signature amplifier is the only amplifier in the world that is built to last. It's built to last because it's built to last.
