

FORM FOLLOWS FUNCTION

— and this stand follows both!

Born as a Dan D'Agostino product, this power amp stand is machined from solid aluminum for an optimal vibration damping, structural integrity and load capacity.

Aesthetically, it speaks the same design language as the Relentless 800, with side accents replicating the amplifier's iconic heat sink architecture, and refined copper details – also CNC machined from solid – echoing the brand's unmistakable identity.

But there's more... This support features some additional technical features:

- Solid stainless-steel height-adjustable feet, for a perfect levelling on uneven surface;
- Level gauge, to ensure flatness;
- Two different decoupling steps: on floor saving disks & between the stand and each foot.

BORN TO IMPRESS

Two different minds. One shared vision – Exceeding the ordinary.

This marked the beginning of our collaboration with Dan D'Agostino. A collaboration which resulted in a power amp stand that emerges, by design, as the natural extension of the Relentless 800 Mono Amplifier.

More than just a support – A masterpiece of precision engineering and artistry which blends together months of R&D, premium materials, and uncompromising attention to details.
