

David D'Agostino
MASTER AUDIO SYSTEMS

We are excited to announce that the **Momentum MLife Integrated Amplifier** is now shipping in both silver and black. The perfect centerpiece for the system where space is tight but performance and elegance cannot be sacrificed, the **Momentum MLife**, couples today's leading digital technologies with a reference integrated amplifier.

The Momentum MLife Integrated Amplifier

Combining uncompromised sound quality with incredible convenience and unlimited listening options provided by networking, the Internet and smartphones, the **Momentum MLife Integrated Amplifier** is the pinnacle of elegant performance.

The **MLife** is pure Momentum, right down to the core analog preamp and power amp circuits, which are essentially the same as the ones in the **Momentum Integrated Amplifier**. It has the same musicality-and the same effortless power, 200W into 8 Ohms, that all D'Agostino amplifiers are known for. With this amp, you can truly achieve the maximum performance your speakers are capable of, no matter what speakers you use.

From Dan, "I have to admit I've always loved the convenience that mass-market wireless audio products offer. I haven't been satisfied with their sound, but I knew it was possible to do better. The **Momentum MLife** is proof." For the first time, Momentum-quality audio circuitry and build quality are combined with the features found in the best wireless audio products.

The listening options are endless. You can listen to full-quality, lossless audio streamed through AirPlay, USB drives, or a network attached hard drive. You can stream from your phone or tablet via Bluetooth. And of course, you still have five analog audio inputs-feeding a pure analog, fully balanced signal path-to get the best sound from your turntable, music server, or the front left and right channels of your home theater. At the end of 2015, streaming music service, Tidal, will be added via a free software update.

An iOS app offers complete control of the **Momentum MLife Integrated Amplifier** including power, input selection, volume control, and music playback.

An Apple iPod Touch functions as the MLife's remote control and is included with every **Momentum MLife Integrated Amplifier**.

The analog circuits in the **Momentum MLife Integrated Amplifier** use through-hole construction, in which the contact legs of the components go all the way through the circuit board and are soldered from underneath. This technique was the norm decades ago, but it was mostly abandoned when less-expensive surface-mount construction was invented. The performance of through-hole components are superior in technical performance and reliability as compared to their surface mount counterparts.

As with all D'Agostino products, We assemble the **MLife** by hand in our Arizona factory. Every unit is fully fully tested to ensure it works perfectly and achieves the performance we demand.

Full specifications and more information will be on the **Momentum MLife** page soon.
