

New Product Release

Hold for release until January 1, 2014

Aurender X100 with USB Digital Output

(Jan. 1, 2014) Seoul, Korea – TVLogic , a leading Korean audio and UHD broadcast monitor manufacturer, is launching the much anticipated Aurender X100 digital music player at the 2014 International CES being held in Las Vegas from January 7-10. Designed to make managing, viewing and playing digital music collections fun and easy, the X100 supports bit-perfect playback of DSD (DIFF/DSF), WAV, FLAC, ALAC, APE, AIFF, M4A, and other major formats at native bit and sampling rates. The X100 is equipped with a high performance USB digital audio output and features a Gigabit Ethernet port for software upgrades, file transfers and network connectivity, two USB data ports, internal hard drive for storage and 120GB solid-state drive cache for latency-free playback.

The X100 digital music player incorporates many innovations originally developed for the higher priced Aurender S10 and W20 models, including the solid-state drive cache for playback which completely eliminates jitter, latency and noise resulting from spinning hard drives and compact disks. The X100 also uses the same high performance USB digital audio output as the flagship Aurender W20 with proprietary power circuitry to eliminate noise in the audio signal and is carefully shielded against RF interference.

While the Aurender X100 can be operated using the front panel buttons, using the Aurender Conductor App for iPad® and iPad Mini is the most convenient way to sort, browse and play music, in addition to setting various options on the X100 digital player such as display mode (song information, level meter, playlists, device information), power mode (On/Off or Standby), DAC options and more. The Aurender S10 and W20 models also use the Aurender Conductor App as the user interface. Originally introduced in 2011, the Aurender Conductor App undergone several upgrades to add new features and improvements in collaboration with Aurender users and industry partners. With just a press of a button or a flick on the iPad, entire music libraries can be instantly sorted into various categories, custom categories, by bit and sampling rates, and by user rating. Designed for large digital music libraries, the Aurender Conductor App has extensive features to make sorting, viewing and playing fast and easy.

The suggested retail prices of the X100S and X100L are \$2,999 and \$3,499 respectively.
