

Experience the CERA technology

The CERA technology is based on direct coupling for effective transfer of sound interfering resonances. Fast resonance transfer is provided by ultra-hardened high-tech ceramic balls.

Combined with precision-machined stainless steel the optimum balance between damping and deflection is achieved. The resulting vacuum effect draws off unwanted resonance directly where it evolves. The clear advantage: no resonance build-up, no overdamping, no loss of deflection. The CERA technology improves the sound wherever sound impairing resonance restricts the musicality.

„The improvement in low-level resolution was dramatic,
with increased focus, transparency and separation.
Highly recommended.“

(HIFI plus, England)

Ceraball

Information

The genesis of the CERAFamily offers an excellent access into the world of finite elemente's sound enhancing systems. Being in the third generation already, Ceraball provides a screw-on function as well as an attractive budget price.

- excellent value for money
- optimum range of application: 5 – 40 kg of component weight
- recommended for audio components, loudspeakers and equipment supports

Specifications

- Material: precision machined stainless steel, high-tech ceramic ball
- Usable height: 30 mm
- Dimensions: \varnothing 35 mm (top section), \varnothing 55 mm (bottom section)
- Load capacity: 300 kg (set of 4), 225 kg (set of 3)
- Versions: set of 4, set of 3
- Features: height adjustable within 10 mm of range, attachable (supplied with M6 and M8 bolts), supplied in high-quality wooden box

Fine tune your music
