ANTI-STATIC RECORD BRUSH

More than two million anti-static carbon fibre bristles remove harmful dust from the surface of all vinyl records

- Eliminates static build-up
- Cleans deep into the grooves
- Improves sound quality
- Integral stand with built-in dust removal mechanism
- Protects your favourite artists
- Prestores the life of vinyl records
- Easy to use
- Also cleans LCD/plasma screens and computer monitors

record mat

EN:
This high-performance record mat is made from a unique composite of India rubber, cork and leather. Its fine, granular composition keeps firm hold of every record played, whilst suppressing the resonance generated during playback. The mat's dual-layer design makes it easy to adapt to different record thicknesses without needing to alter tonearm height (VTA) - use the first layer for audiophile-grade vinyl, add the second for standard records. The result is the perfect coupling between record and platter - an utterly silent foundation, ensuring every drop of musical detail within the groove is delivered with unfettered clarity.

High

EN:
This high-performance record mat is made from a unique composite of latex rubber, cork and leather. Its fine granular composition keeps firm hold of every record played, whilst suppressing the resonance generated during playback. The mat's dual-layer design makes it easy to adapt to different record thicknesses without needing to alter tonarm height (VTA) - use the first layer for audiophile-grade vinyl, and the second for standard records. The result is the perfect coupling between record and platter - on ultra-quiet foundations, ensuring every note of musical detail within the groove is delivered with unfiltered clarity.

DE:
Anisotatische Plattentellerauflage aus Feingranulaten (Kautschuk, Kork, Leder). Unterdrückt die typischen Resonanzen von Vinylschallplatten und bietet einen ruhigen Untergrund. Die zwei Teile ermöglichen den einfachen Ausgleich unterschiedlicher Vinylstärken, ohne Anpassung der Tonarmhöhe (VTA).

FR:
Le plateau anisotatique en granulés fins (caoutchouc, liège, cuir). Amortit les résonances typiques du vinyle et constitue un support de disque silencieux. Les deux pièces permettent de compenser de façon simple les différentes épaisseurs de vinyle, sans adaptation de la hauteur du bras de lecture (VTA).

ES:
Cobertor antiestático del plato giradiscos hecho de granulado fino (caucho, corcho, cuero). Elimina las típicas resonancias del vinilo y crea un silencioso fondo. Las dos partes permiten la fácil compensación de vinilos de diferente grosor, evitando el ajuste del brazo (VTA).
