Kimber Kable announces new Evolution line from WattGate

We are happy to introduce WattGate's new line of connectors, WattGate Evolution (EVO). As the name suggests, this is an upgrade to the already amazing WattGate Classic connectors.

During the last two years WattGate has been diligently designing and taking input from OEM customers and end-users alike and using this feedback to perfect these connectors.

What sets the WattGate EVO apart from the WattGate Classic:

- New Look
- New WattLock Terminals (New solid box design with teeth on the WattLock box and contact blades to give superior contact pressure to wires)
- Easily accepts up to 8 awg wire. This is made possible by the new over-sized WattLock box and funnel holes. (Accepts up to 19 mm O.D. cable)
- Utilizes 2.5 mm hex socket hardware throughout the plug for better control on torque and less tendency for those accidental 'slips'.

WattLock 330 EVO Contact

As ALL WattGate connectors, the EVO line is UL, CE & ROHS compliant. Available in Audio Grade GOLD, RHODIUM or the standard high spring-rate brass configurations.

All EVO connectors are available in a CLEAR/SMOKE combination or all MATTE BLACK. These connectors will be shipping in March.

WattGate took feedback from customers regarding the stickers used for marking of the Classic connectors and have switched to an elegant anodized aluminum ring on the EVO Audio Grade versions. The standard version uses a plastic ring, which can be upgraded to the anodized aluminum ring. This aluminum ring also gives you the ability to have a custom engraved name on the connector (additional charges apply).
