## Kimber Kable PK-10AG P

\$400/6'

The PK-10AG picks up where the mean green original Palladian leaves off but in a more malleable, far less costly package. The Kimber is an exemplar of the heavy hitting power cord—high output, energy and dynamics. It has a richer thicker midrange with an emphasis on soundstage depth not unlike the topflight Palladian although not as wide open on vocals. But for bass extension and sustain it is deserving of some of the highest marks. Nicely detailed and uncompressed with only vague remnants of treble peakiness, the PK-10AG exemplifies an open, colorful, high density sound that places it near the top of any survey.
