

Audio devices that utilize USB™ data modes are commonly used for critical listening and high definition recording. To address this need, Kimber Kable created high performance USB™ type cables. Our Mini BUS™ AG and B BUS™ AG cables utilize large gauge pure silver signal conductors in tandem with large gauge (6.1%) Silver-plated copper drain and shield wires. A high performance High-Density polyethylene (PE) dielectric is used on the signal conductors to maximize signal integrity. Ferrite noise reduction beads are available separately for extra EMI/RFI protection. All Kimber Kable USB™ cables feature crimped and soldered shield to shell connection which helps reduce ground resistance variations.

Features:

- Pure Silver signal conductors
- (6.1%) Silver-plated copper power conductors
- (6.1%) Silver-plated copper drain and shield wire
- High-Density polyethylene signal conductor dielectric
