

PARKER DUO

PARKER DUO

Parker Duo is a premium stand speaker from the new Parker series.

The cabinet design features sleek, tapering sides and M-Board: a multi-layered material which offers extreme resonance reduction. The result is a cabinet so resonance-free, that it completely disappears within the soundstage. With improved handcrafted techniques, the cabinet is finished to Marten's demanding standards.

The multi-diverse crossover technique is a progressive move for Marten. As are the bespoke ceramic drivers. When it comes to bass, we chose passive radiators to give the control and dynamics needed for a speaker of this class.

The stand is designed to look lighter than it is, but rigid enough to significantly reduce resonance. The Marten IsoPucks by ISO Acoustics further reduce resonance, freeing the speaker of the soundstage, while delivering controlled sound and detailed, rich bass.

Parker Duo can be upgraded to Diamond Edition, featuring a pure Diamond tweeter, more advanced crossover components, improved terminals and top of the range Jorma Statement internal cables. All Parker models can be elevated to the ultimate in premium loudspeakers.

At a glance

- New for 2020
- 2-way stand speaker
- 1x bass/mid and 1x tweeter
- Crossover: Multi diverse technique
- Passive radiators
- Sensitivity: 88 dB
