

PARKER QUINTET
DIAMOND EDITION

PARKER QUINTET

Parker Quintet is the flagship loudspeaker of the new Parker series.

The cabinet design features sleek, tapering sides and M-Board: a multi-layered material which offers extreme resonance reduction. The result is a cabinet so resonance-free, that it completely disappears within the soundstage. With improved handcrafted techniques, the cabinet is finished to Marten's demanding standards.

The multi-diverse crossover technique is a progressive move for Marten. As are the bespoke ceramic drivers. When it comes to bass, we chose passive radiators to give the control, dynamics and impact needed for a speaker of this class.

The Marten IsoPucks by ISO Acoustics further reduce resonance, freeing the speaker of the soundstage while delivering controlled sound and detailed, powerful bass.

Parker Quintet can be upgraded to Diamond Edition, featuring a pure diamond tweeter, top of the range Jorma Statement internal cables, more advanced crossover components and improved terminals. All Parker models can be elevated to the ultimate in premium loudspeakers.

At a glance

- New for 2020
- 2.5-way floor-standing speaker
- 4x bass/mid and 1x tweeter
- Crossover: Multi diverse technique
- Passive radiators
- Sensitivity: 93 dB
