

PRESS RELEASE · MAY 2025

NEW COLTRANE EXTREME MODELS

At High End Munich 2025, we are proud to introduce two remarkable new additions to our flagship Coltrane series: Coltrane Supreme Extreme and Coltrane Quintet Extreme.

These two models are the result of a close collaboration between our design and engineering teams. Representing the finest of what we do, they combine deep material knowledge, advanced component design, and a rigorous approach to craftsmanship. Both are the product of years of focused development and are meticulously built at our facility in Sweden.

Coltrane Supreme Extreme is the most advanced loudspeaker we have ever created. With its dual-tower and bespoke drivers, it delivers outstanding resolution and dynamic power. It features the largest beryllium midrange ever created, Crystalid mid-bass units, and a carbon fibre monocoque cabinet strengthened by solid wood and aluminium. Each pair takes over 800 hours to build, complete with Jorma Paragon cabling and custom Marten terminals. Shown as a static display, it offers a rare chance to see our most ambitious project ahead of its official launch later this year.

Coltrane Quintet Extreme—available for full demonstration—brings much of this innovation to our classic Coltrane form. It shares key technologies—diamond and beryllium drivers, Jorma Paragon cabling, and a precision first-order crossover. The cabinet design achieves excellent resonance control, with tonal balance, impact and detail that deliver a rich and immersive performance. Finished in exclusive Piano Oak Green and limited to ten pairs worldwide, Coltrane Quintet Extreme represents a combination of elegance, precision and power.

We invite you to discover the next evolution of the Marten sound — uncompromising in approach, pure in expression, without limits.

COLTRANE SUPREME EXTREME

Coltrane Supreme Extreme is the most advanced loudspeaker we have ever created. A five-way, dual-tower design, it sets a new benchmark for what a flagship speaker can be—combining custom-engineered drivers, pioneering materials, and over 800 hours of meticulous hand-assembly.

Every element of Coltrane Supreme Extreme has been designed from the ground up. Its dual-tower design separates the bass section from the main speaker, optimising dynamics and resonance control. The cabinet itself is a seamless carbon fibre monocoque, bonded with solid wood and aluminium in a sandwich construction that delivers unmatched rigidity and acoustic transparency.

At the heart of its design lies a custom driver suite: 1" and 3" pure diamond tweeters for effortless treble and midrange clarity; a 7" beryllium midrange driver—one of the largest of its kind; four 8" Crystalid mid-bass units that deliver punch with minimal distortion; and a powerful low-end system of five 10" aluminium sandwich bass drivers supported by ten passive radiators, for sound that is dynamic, precise and emotionally engaging.

A proprietary first-order crossover ensures perfect time and phase coherence. Signal path purity is maintained throughout with Jorma Paragon internal wiring and bespoke Marten terminals. The speaker sits atop mirror-polished stainless steel stands equipped with fully-upgraded Marten Isolators for complete resonance control.

Coltrane Supreme Extreme is the ultimate statement—engineered for the closest possible connection to the music.

AT A GLANCE

- 1" pure diamond tweeters
- 3" pure diamond high midrange
- 7" pure beryllium midrange (largest ever built)
- Four 8" Crystalid mid-bass drivers
- Five 10" aluminium sandwich bass drivers
- Ten 10" aluminium sandwich passive radiators
- Proprietary first-order crossover
- Jorma Paragon internal wiring
- Carbon fibre faceplate
- Bespoke Marten terminals
- Mirror-polished stainless steel stands with new upgraded Marten Isolators
- Finishes: Matte Walnut, Matte Cherry, Matte Maple, Matte Oak
- Dimensions: Main – 30 × 182.2 × 63.5 cm (140 kg) Bass – 70 × 182.2 × 63.5 cm (270 kg)
- Retail price: €950,000/set

COLTRANE QUINTET EXTREME

Coltrane Quintet Extreme brings the essence of Coltrane Supreme Extreme into a more compact four-way design, optimised for high-performance listening in real living spaces. It carries forward the same sonic philosophy and precision engineering as the flagship model.

Its cabinet is constructed from carbon fibre laminate with a sandwich baffle of aluminium, fibreboard and solid wood—engineered to minimise resonance while preserving time and phase accuracy. Internally, it uses Jorma Paragon cabling and a proprietary first-order crossover built with custom components, ensuring natural response and tonal integrity across the spectrum.

Performance is equally impressive: fast, controlled bass, expressive midrange, and effortless treble. The driver complement mirrors our flagship—with the same 3" pure diamond high-midrange, 1" pure diamond tweeter, and 7" beryllium midrange—delivering an expansive sound with lifelike dynamics, rounded-off in the lower end with two 10" aluminium sandwich bass units.

Finished in Piano Oak Green and limited to just ten pairs worldwide, Coltrane Quintet Extreme is hand-built in Sweden for those who demand reference-level performance in a form that integrates beautifully into real living spaces.
