

MARTEN

INVITATION TO THE MARTEN ROOM AT HIGH END 2011 IN MUNICH.

FOUR AMAZING AUDIO WONDERS IN ONE SYSTEM.
MARTEN, JORMA DESIGN AND SMT.

In Marten's search for perfection, the step to develop M-Amp Mono Power Amplifier was a natural progression in the Marten range. Patrick Boström, the CTO of Abletec has patented a technique called AMS which gives 550W in 8 ohms. This, combined with chief designer of Marten, Leif Olofsson's audio tuning, is enabling this project to reach a new level of fidelity.

Marten also have another substantial premier: Coltrane 2, a 40% larger, more refined version of the original Coltrane model from 2002. Those that know the original Coltrane will have no doubt of its calibre, and for those who don't, High End in Munich is a perfect opportunity to listen to this extraordinary system.

Please come and visit us in room: **Atrium 4 E214**. If you would like to schedule a meeting with us, please get in touch.

Svanå Miljö Teknik

Svanå Miljöteknik is based in Stockholm, Sweden, where it's been active for the last 15 years. All products are finished in-house or at Herrljunga Träindustri, a company specialising in the manufacturing of wooden products.

Matts Odemalm (engineer, KTH-Stockholm) is the owner and chief architect at Svanå. Even though he's responsible for the final planning and design of all products, Svanå develops much of their products together with professional studios around Sweden. To an increasing degree, Svanå also develops products for in-home use, making the acoustics less intrusive on a "standard" home interior.

Matts' unique adjustable bass-traps, together with his new Wing Family diffusor concept doesn't just give the music lover a reference listening room, the same room also acts as a world class recording room. This will be demonstrated for the first time in Munich.

JORMA DESIGN

The word "unity" has several meanings: "The state or quality of being one," and "the state or quality of being in accord and harmony." Of course, in mathematics, unity means "number one."

The Unity cables replace the No. 1 cables, which have been in production nearly eight years.

In design, the Unity cables are totally different from the No. 1 cables. In all aspects, the Unity is a more advanced cable, which is not necessarily reflected in the price.

The Unity cables had their premier at the CES 2011 in Las Vegas, but the cables used there were the final prototypes. The first show in which production versions of the Unity cables can be heard will be in Munich, at High End 2011 in May.

While the technology for the Unity cables is borrowed from both the Prime and Origo series and the No. 1/No. 2 series, the look and sound is closer to that of Origo/Prime than No. 1/No. 2. That is why the Unity cables will be the third series that have wooden parts like the Origo and Prime series, this time maple, with copper labels.
