

M1 Power Amp

The M1 Power Amp is scheduled for release in February 2012.

General description of the M1Power Amp

The M1 Power Amp was designed to match a CLiC and is exactly the same size. It delivers a comfortable 60 wpc per channel into 8 ohms which virtually doubles into 4 ohms. The distortion is a low 0.05%. Phase integrity, frequency response, noise ratio and stereo separation are all excellent.

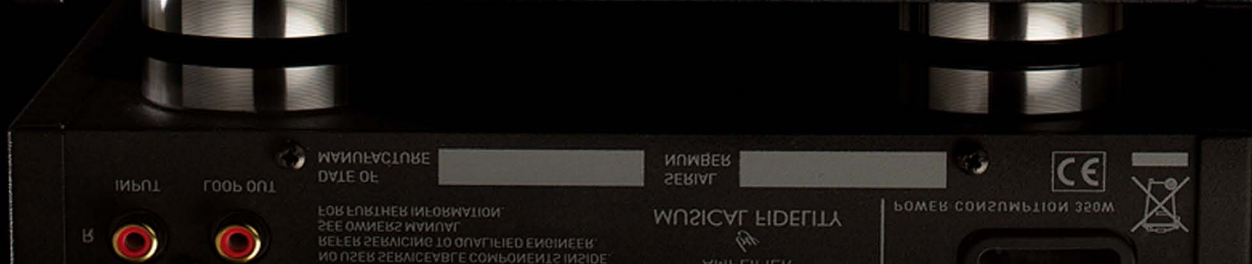

The M1 Power Amp is a great technical performer. Like all other Musical Fidelity amplifiers it will drive a huge range of loads with ease.

However, the M1 Power Amp has a vitally important feature.....

at the push of a button it becomes a 100 watt monobloc (200 watt transient peak capacity into 4 ohms). A real powerhouse.

Even better still is the retail price.....£899
