

Nagra II-S Preamp and Modulometer x

The Nagra Modulometer is an iconic, highly precise analog audio level meter developed by Stefan Kudelski for Nagra professional recorders, known for its accuracy in showing sound levels, especially transients, unlike faster VU meters. Featuring coaxial needles (often red and black for left/right channels) on a calibrated scale, it indicates input/output levels, power status, and balance, serving as a crucial tool for location sound recording in film, broadcast, and scientific applications, High End audio, becoming a hallmark of Nagra's functional design. The new Nagra II-S Preamp feature the bigger Modulometer like the REF Line.
