★
ZENITH

**THE LEGENDARY SWISS WATCH MOVEMENT
EL PRIMERO by ZENITH, inventor of the
high-frequency self-winding chronograph**

Look at it carefully! Here before you is the most famous movement in watchmaking history, the one that every enthusiast around the world is capable of naming. It is currently the world's most accurate series-produced movement. Its secret lies in the cadence of its balance. While the others generally perform 8 vibrations per second at best, the El Primero calibre beats 10 times in that same second.

Zenith was the first watch brand to produce an integrated column-wheel self-winding chronograph movement, the legendary El Primero calibre which also featured another technical feat in the shape of its high 10 vibrations per second frequency. Since 1969, it is the series-produced calibre that achieves the greatest level of precision and the only one directly connected with the regulating organ and thus able to truly measure 1/10th of a second.
