In celebration of 40 years in the pursuit of high-performance in audio, conrad-johnson is pleased to present our new limited production ART150 (stereo 150 Watts/channel) and ART300 (mono 300 Watts) amplifiers, each a virtual window on the emotional experience of live music right in your home.

For those that like to have their cake and eat it too, the Pass Labs INT-60 is a special product.

Should you not require the massive power of their enormous monoblocks, the INT-60, which still weighs in at just over 100 pounds, delivers 60 watts per channel, with half of that power delivered in Class-A mode.

If you have relatively efficient speakers, a room with modest dimensions, or not need concert hall levels, the INT-60 gives you an incredibly large view of what Pass Labs' top components offer, at a much lower price.

Add a balanced input, and the ability to use the amplifier and preamplifier sections separately, and this makes for an incredibly versatile integrated.

Like the other Pass amplifiers we've used, the INT-60 runs warm, so be sure it has plenty room on the rack to breathe.

We invite you to read the full review here.

# Pass Labs INT-60

## *The Good:*

Top range sound  
Never needs tubes  
Balanced and inputs  
Amp and Pre sections can be  
used separately

## *Not so much:*

A Phonostage and extra balanced  
input would be nice

## *The Verdict:*

Best bang for the buck  
in the Pass range
