G-Series

Introducing Gibraltar™

For 2010, REL Acoustics Ltd. announces Gibraltar Series, yet another extraordinary range of Sub-Bass Systems that carries forth the REL tradition of excellence in low frequency reproduction. Recognizing the need for a range that will satisfy both the high-end two-channel and home cinema enthusiast as well as provide the ability to easily scale bass output through the use of multiple units, REL created the Gibraltar G1 and G2.

The G-Series uses a sealed cabinet with exceptionally rigid internal bracing made of layered hardwood. This robustly constructed enclosure houses a massive ultra long-throw carbon-fiber driver, of our own design, that produces prodigious bass output under the most demanding of conditions. A complete REL connectivity suite allowing for multiple sophisticated hookup options relative to its use, in both two-channel or .1/LFE film sound. Digital main amplifiers pose no problem for Gibraltar as REL incorporates a proprietary circuit for their use.

Setup and adjustment is made simple and easy by a unique digitalrotary control-based remote. The small round handheld remote is capable of making all critical adjustments from your listening position. An LED display module mounted on the lower front of the enclosure provides a large bright readout of all adjustable functions. The display reverts to “off” when not in use.

When “too much” is not enough, each Gibraltar model can be used in multiples. By stacking the units using the optional stacking rails and “daisy chain” connectivity, bass output is able to be scaled for use with even the grandest of main speakers.

The artisan applied hand-rubbed lacquer finish is truly fine-furniture grade so it will blend perfectly with your décor and main loudspeakers. The choice between a deep gloss black lacquer, satin gloss “natural” cherry or high gloss carbon grey finish is yours to make.

12" Carbon Fiber Woofer

REL Connectivity

IR Remote Control

G-Series Features

- Custom-made 12" long-throw carbon-fiber drive unit
- 600 Watt Class A/B power amplifier
- Separate Hi Level and .1/LFE inputs (single ended/balanced inputs/outputs) each with their volume controls (Hi Level - Neutrik Speakon / Lo Level – RCA Jacks)
- Extremely low crossover points, down to 20 Hz, allow accurate “blending” with the finest main speakers
- “Daisy-chain”: High Level and .1/LFE inputs paired with matching outputs allow for connection of multiple woofers in either two-channel or home theater applications
- Proprietary REL-D™ digital amplifier input provides the appropriate impedance and grounding environment for most Class D amplifiers
- IR Remote Control (included) provides for all adjustments with intuitive feel and replicates the functionality of traditional REL rear panel controls (High Level Volume, Crossover, .1/LFE Volume, Phase and Security Lock)
- Optional stacking kit that include rails, hardware and connecting cable
- Available in Piano Black Gloss Lacquer, Cherry or Carbon Grey
- G1 Dimensions (HWD)
18.25 x 22.5 x 26 (including feet) inches
463.6 x 571.5 x 660 (including feet) millimeter
- G1 Weight
108 lbs., 49 kg

G2 retains all the same features as the G1 but employing a custom-made 10" long throw carbon-fiber drive unit and 500 watt Class A/B amplifier in a more compact footprint.
