MODEL 3000 VACUUM TUBE PREAMPLIFIER

Closer to the music

The balanced output isolates you from common mode noise, and the separate power supply isolates you from hum noise bringing you closer to the music.

At the same time Zanden's unique singled ended circuit, an elegant design that is as simple as it is well thought out, protects the delicate musical signal.

The best designs incorporate the best technologies, old and new. Only than can one achieve the best sound, and we are confident that you've never heard a vacuum tube preamplifier quite like this.

Description:

The Model 3000 preamplifier can control up to 4 sources. It has 4 inputs: 3 RCA and 1 XLR. At the output there are 2 pairs of RCA and XLR connectors, so bi-amping is a snap. At both the XLR input and output a balanced signal is achieved using transformers. The Model 3000 incorporates a unique single-ended circuit with no negative feedback. A phase switch is conveniently located on the front panel, allowing you to easily check the phase of your speakers or recordings. The main unit connects to the separate power supply via an included 10-pin cable.

The separate power supply has an IEC power cable receptacle. Noise shielding materials are used throughout.

The Model 9000 is backed by a TWO-YEAR LIMITED WARRANTY. Vacuum tubes are covered against defects for 90 days.
