# HOME THEATER COMES OUT OF HIDING

*Stylish design with  
 stunning performance.*

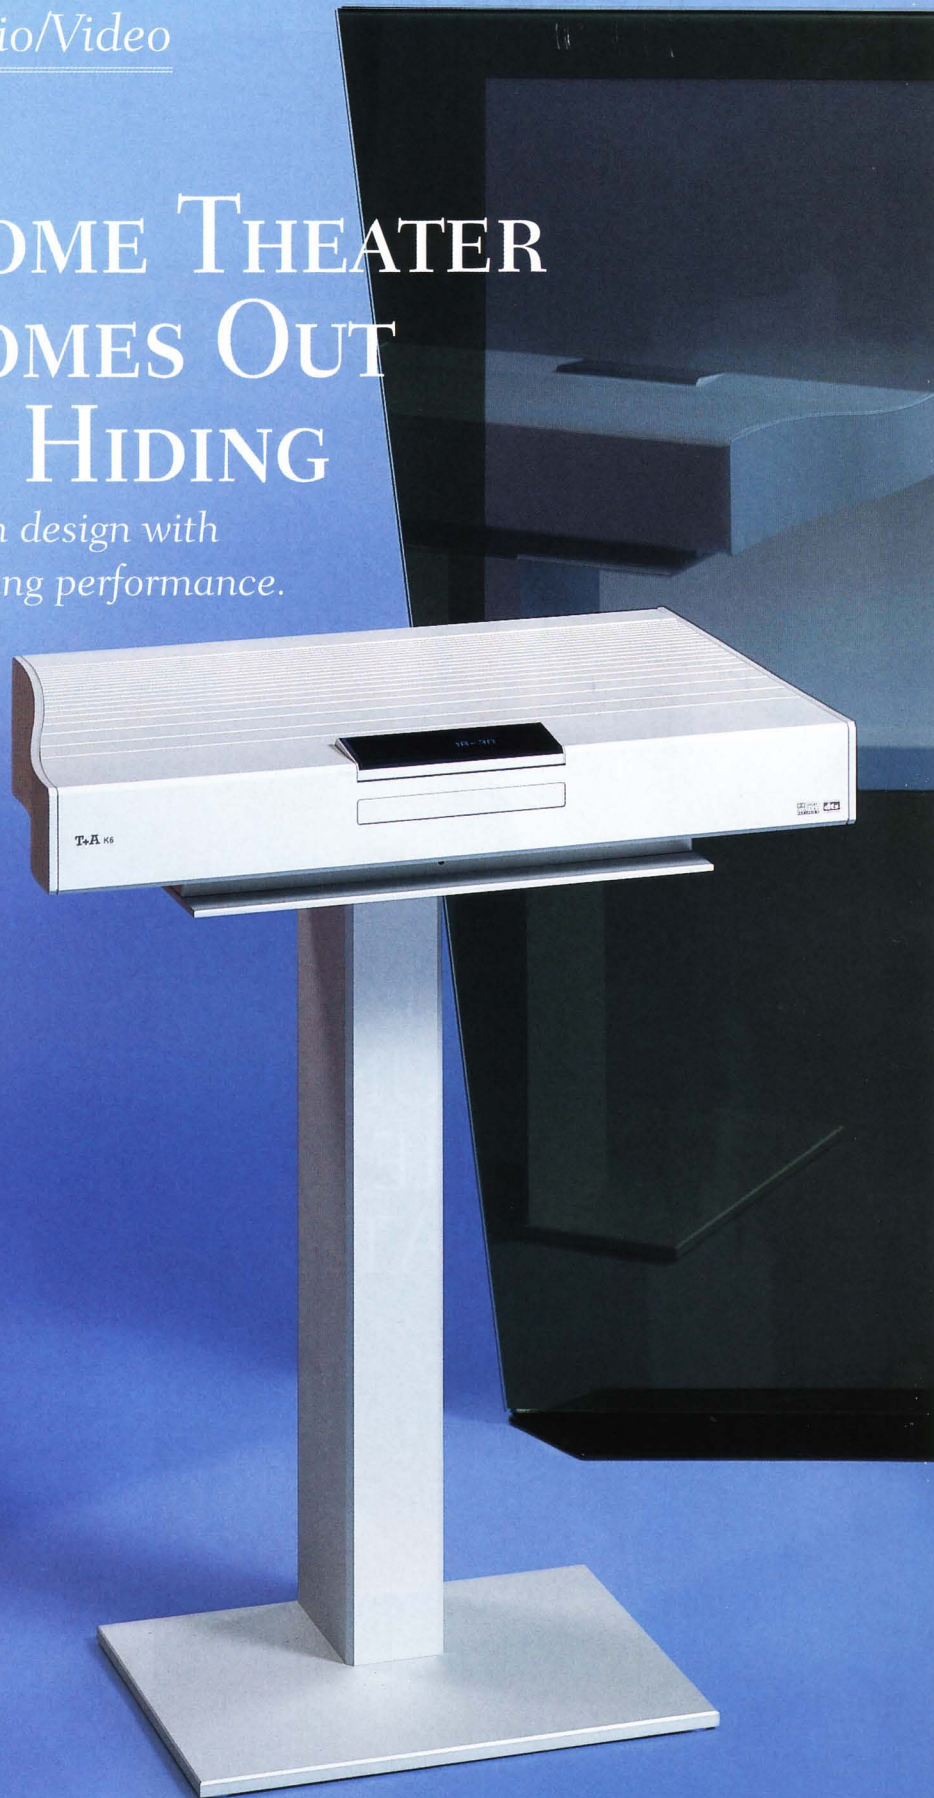

An all-in-one home cinema in which everything is included save speakers and a monitor can almost provide a full-scale theater experience. The advantage of the former is a more room-friendly system appropriate for a study, bedroom, yacht, or other intimate space. A little-known company in Germany provides the best of this class. The low-profile, ultra-sleek **K6 from T+A** (pronounced *T plus A*) contains a DVD player, an AM/FM tuner, an audio/video surround-sound processor, and all of the amplification necessary for 5.1 channels for Dolby Digital- or DTS-encoded DVDs. T+A incorporated all of the electronics into a neat enclosure without compromising the sound quality or the picture.

To display the picture itself, the choice is the **Grand Cinema RTX from Sim2 USA**. Its unconventional profile and 55-inch screen make it ideal for bijou home cinemas.

**Vienna Acoustics'** aluminum speakers match well in terms of acoustics and appeal. The **Valhalla series from Nordost**, which includes flat wires for installing on walls or under carpets, completes the setup. —KEN KESSLER
